

Project Initialization and Planning Phase

Date	2 July 2026
Team ID	XXXXXX
Project Name	A Comprehensive Measure of Well-Being
Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement Template):

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love. A well-articulated customer problem statement allows you and your team to find the ideal solution for your customers' challenges. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1 (Policymaker)	A government policymaker in an emerging economy.	Identify critical development gaps to prioritize national investments and policy interventions.	I lack a predictive tool to simulate how improvements in specific sectors will shift our overall HDI tier.	Development planning requires a holistic view of health, education, and income, rather than relying solely on economic growth (GDP).	Anxious about misallocating resources and pressured to show measurable, holistic progress.

PS-2 (Researcher)	An international development researcher.	Assess and classify countries requiring urgent development intervention based on multi-dimensional data.	Processing and analyzing diverse indicators (life expectancy, schooling years, GNI) manually is highly inefficient.	Accurate HDI tier classification (Very High to Low) requires complex mathematical aggregation of diverse, real-world indicators.	Overwhelmed by data complexity and concerned about analytical delays affecting aid distribution.
PS-3 (Data Analyst / Student)	A data analyst or university student studying human development metrics.	Understand how different combinations of socio-economic indicators result in specific HDI classifications.	I do not have an interactive platform to input custom values and instantly see the predicted development outcome.	Existing UNDP reports are static and do not allow for real-time scenario modeling or "what-if" analysis.	Restricted in my analysis and eager for a more hands-on, interactive learning tool.
